

Apple Cortland

Semi-dwarf tree that grows 10-15' tall and 10' to 15' wide. Cortland apple tree is spreading with an upright, vase-shaped form. The trees have moderate resistance to fire blight and apple scab. Cortland apples have mid-season bloom beginning in April with pink buds followed by abundant white flowers. Trees usually begin to bear after 4 to 6 years. Large red fruits are ready to pick in September. They are crisp, sweet and tart. Great for pies, making cider and eating. Cortlands reliably bear heaven crops each season. Self-pollinating.

Apple-Jonagold

Jonagold is a cross between Golden Delicious and Jonathan, developed in 1943 at Cornell and officially released in 1968. Large sweet fruit with thin skin that is green-yellow with streaks of crimson. The flesh is creamy yellow. Because of their large size they are now favored by commercial growers in many parts of the world, and the apples can last two months refrigerated. Flavor is sweet with a tangy aftertaste - nice balance of sweet and tart. photo credit: By Glysiak -

Asparagus, Purple Passion

Its special, purple color, flavor and tenderness makes this variety very attractive and useful. Productive yields. Space 6" - 8" apart. (This is closer spacing than generally recommended for asparagus.) Asparagus notes: soil pH level of 7.0 - 7.2. Asparagus plants produce a light harvest in the 2nd year, a larger harvest the 3rd year, and a full harvest in subsequent years. 1 Year Crowns Full Sun, Moist/Dry Soil \$20 for 25 bare root crowns Photo Source:

Price: \$20 for 25 plants

Black Raspberry "Jewel"

Released from the Cornell Small Fruit Breeding Program in Geneva, New York. Produces excellent yields of superb quality berries. The fruit is glossy black in color, a large size, and has a rich raspberry flavor. It is an excellent choice for use in jams and jellies. Jewel is winter hardy and a very reliable choice. Try to plant at least 100 feet from other raspberries or blackberries, to prevent disease.

Price: \$30 for 5

Chester Blackberry

Considered one of the more winter hardy and productive thornless varieties available, Chester blackberry produces large, high-quality fruit that ripens in early to mid-August. Fruit has good flavor when fully ripe, and does not soften or lose its shiny black color in hot weather. Chester plants are vigorous and show resistance to cane blight. 1 Year plants-5 plugs for \$34

Price: \$34 for 5

Duke Blueberry

Early season, high-yielding, consistent variety.

Medium-large berries, slightly tart, very firm,. Blooms late but ripens early, which could protect blossoms from spring frost. Upright habit, height of 4-6 feet.

Duke can self-pollinate, but will make more fruit if you have another variety within 10' to enable cross pollination by insects. Our supplier is now offering these plants in 1 liter pots, delivering vigorous, strong plants for easy transplanting and quick establishment.

Plants are sheared to 12-14" to increase top growth in the first year. Eliminates the drying out and transplant shock that can occur with bare root blueberry plants.

Full Sun, moist soil. one plant in a 1-liter pot for \$15

Price: \$15 for one plant

Honeoye Strawberry

Honeoye strawberry plant is from the Cornell Research Station, Geneva, NY, and has been a top variety for over 30 years. It combines winter hardiness, high productivity, good appearance and color, together with an excellent, firm, large-sized berry. The large berries are easy to pick and the plants produce high yields over a long fruiting season, Home gardeners will appreciate its excellent freezing quality. Optimum flavor is produced by growing this variety in medium to light soil. Early-mid season. **bare root plants in bundles of 25 for \$15**
