

Apple-Jonagold

Jonagold is a cross between Golden Delicious and Jonathan, developed in 1943 at Cornell and officially released in 1968. Large sweet fruit with thin skin that is green-yellow with streaks of crimson. The flesh is creamy yellow. Because of their large size they are now favored by commercial growers in many parts of the world, and the apples can last two months refrigerated. Flavor is sweet with a tangy aftertaste - nice balance of sweet and tart.

Price: \$40 for 1 sapling

Bartlett Pear

The Bartlett is so popular because of its sweet, juicy taste. Each year your tree provides bushels of pears that are great for canning, cooking and snacking. You can pick this delicious fruit in late summer. When ripe, these pears are so sweet that they fill your yard with a delicious aroma. A European pear with large yellow fruit and smooth, juicy white flesh. Fruit trees need a minimum of 6-8 hours sunlight daily, and need water. They are not drought tolerant. Needs a pollinator pear tree growing closely. Blake's Pride will work.

1 bare root tree, 4-6' tall and 3/8-7/8" caliper, for \$40

Price: \$40 for one bare root sapling

Bluecrop Blueberry

Mid season Bluecrop is the leading commercial blueberry variety. Producing high yields of bright firm berries growing in large clusters. Bluecrop can self-pollinate, but will make more and larger fruit if you have another mid-season variety within 10' to enable cross pollination by insects. Our supplier is now offering these plants in 1 liter pots, delivering vigorous, strong plants for easy transplanting and quick establishment. Plants are sheared to 12-14" to increase top growth in the first year. Eliminates the drying out and transplant shock that can occur with bare root blueberry plants. One plant in a 1 liter pot for \$15 Pollinator, Full Sun, Moist Soil photo: USDA

Price: one plant for \$15

Chester Blackberry

Considered one of the more winter hardy and productive thornless varieties available, Chester blackberry produces large, high-quality fruit that ripens in early to mid-August. Fruit has good flavor when fully ripe, and does not soften or lose its shiny black color in hot weather. Chester plants are vigorous and show resistance to cane blight. 1 Year plants-5 plugs for \$34

Price: \$34 for 5

Highbush Blueberry (*Vaccinium corymbosum*)

Wild highbush blueberries are predominately found in wetland margins, moist woods, bogs, swamps and low areas. Berries mature in August - try to beat the birds. Many birds, including catbirds, scarlet tanagers, and thrushes, relish the berries. As do bears. Old shrubs can take on an interesting, gnarled appearance with a spreading crown.

The upright, deciduous shrub native to eastern North America. Mature plants will reach around 5-8' tall with an equal spread and a dense, rounded habit. Foliage flashes bright shades of coppery red in fall. Loose clusters ("corymbs") of white-pale pink, pendulous, urn-shaped flowers bloom in spring. The round, sweet berries are dark blue to purple, have a dull, blue-grey bloom on their surface, and incorporate the sepals. For best fruit production, you will want to plant several within 10-25 foot of each other. These are not named varieties, so not bred for bountiful harvests. These rooted cuttings come from Michigan. 1 year old rooted cuttings, 6-12" - 10 for \$35

Price: \$35 for 10
