## Buttonbush

Also known as buttonball, button willow, riverbush. This Semi-aquatic native shrub is one of the latest to leaf out in spring. It has distinctive balls, or buttons, about the size of a gumball, of white to cream colored flowers that bloom in June. The flowers are fragrant and last about 1 month. Flowers are followed by seedheads that turn red and eventually dark brown. The seedheads last and provide winter interest. Grows 5'-12', tall, 4'-8' wide. Grows in full sun to partial sun. Grows in wet soils, even flooded conditions and standing water. Native to eastern US and Canada, and Mexico. Scattered populations in southwestern US. Both nectar and pollen are important. Special value to Honeybees, Native bees including bumblebees Also attracts butterflies, insects, moths including Titan Sphinx, Hydrangea sphinx. Fruits are eaten by waterfowl, and birds. 18"-24" 2-year seedlings \$25 for 5 bareroot seedlings.

## Serviceberry *Amelanchier canadensis*

Also known as Canadian or eastern Serviceberry, Shadbush, Shadblow, Juneberry, Junebush Large shrubs or small understory tree. Blooms in early spring, March, with proliferation of fragrant white flowers. In the summer it has crimson to purple colored fruit which are attractive to wildlife and edible by humans. In fall the leaves turn showy red and orange. It grows 6'-20' tall. Good for woodland gardens, native gardens, along stream banks and ponds. Colony-forming, spreading by sucker growth. Prune to control size. It gets its name shadbush or shadberry because the berries coincide with the annual shad run upstreams in New England. Grows in sun, partial sun and shade. Best in part shade condition, tolerant of sun with adequate soil moisture. Tolerant of many soil conditions, prefers in wet locations, often found in swamps. Tolerant of black walnut toxicity, salt. Native to eastern North America. Native Habitat: Wood borders; moist, upland woods. Special value to Native Bees and attracts birds. Larval host for striped hairstreak butterfly. 12"-18" 2 year seedlings \$15 for 4

## Black Walnut, Juglans nigra

Also known as Eastern Black Walnut, American Black Walnut A beautiful shade tree and food source for humans and wildlife. Black walnuts grow 50-75 ft. The nuts are edible but are not the grocery store variety of walnut, which comes from the English walnut. The tree will provide edible nuts at ages 12 -15 years. The wood is highly valued for lumber and furniture making. Over-harvesting has depleted native populations. But care must be taken when choosing a location for this plant. The tree releases juglone, a toxic substance found in the leaves, bark, nut husks, and roots. This is an example of allelopathy, Allelopathy is the chemical inhibition of one plant (or other organism) by another, due to the release into the environment of biochemicals acting as germination or growth inhibitors. Many garden vegetables, fruits and conifers are susceptible to juglone. These include serviceberries, chestnuts, pines, arborvitae, apples, cherries, tomatoes, potatoes, peas, peppers, cabbages, alfalfa, blueberries, blackberries, azaleas, rhododendron, lilacs, hydrangeas, privets and plants in the heath family--if planted too close. Grows in Sun, Part Shade, Moist, rich soils. Native range is eastern US, Massachusetts south but not northern New England. Hosts over 20 types of caterpillars and many insects. Nuts are eaten by squirrels and chipmunks. \$11 for 3, 2'- 3' seedlings Use coupon code SRINGISHERE for 15% discount.

## Tulip Tree

Liriodendron tulipifera. Also known as tulip poplar or yellow poplar. One of the largest native trees growing over 100 feet tall. Distictive 4 lobed leaves are waxy. Large tulip-like flowers are 2 inches tall, yellow, green and orange. Blooms May- June after leaves fill out. Leaves turn yellow in autumn. Sun, partial shade, shade moist rich soils. This large tree needs lots of space to grow fully. It can also be pruned every 2-3 years to keep it shrub sized. Nesting tree for birds. Nectar attracts hummingbirds, bees, butterflies, birds, including cedar waxwings. Flowers, seeds, buds eaten by squirrel and deer. Special value to honeybees. Larval host for Tuliptree Silkmoth and Eastern Tiger Swallowtail. Native to low rich woodlands, stream banks in most of Eastern US. Intolerant of salt, compaction, drought and wetness. 18"- 24" tall, 2 year old, bare root seedling. \$16.00 for 4 seedlings.

## Butterflyweed, Asclepias tuberosa

Also known as Butterfly Milkweed, Pleurisy Root Milkweed of meadows and prairies, grows 1- 2.5 feet tall. It has umbels of orange flowers that bloom early summer to midsummer and sometimes again in late summer-autumn. One of few orange native flowers. These are also great a cut flowers. Grows in dry, sunny locations. Butterflyweed is native to eastern, midwestern and southern US and Quebec. Although widespread in Massachusetts is it rare and protected in our neighboring New England states. Like many other milkweeds this plant is a host for monarch butterflies. Special attention has been brought to the milkweeds because of their specialist association with the monarch butterfly caterpillars as part of efforts to protect monarch butterflies.

- For more information on monarch butterflies: [Monarchs and milkweed](#)
- and this recent article: [are-monarchs-endangered-scientists-debate](#)

High wildlife value, attract bees, butterflies and hummingbirds.

It is the host for monarch butterfly and Queen butterfly caterpillars. Recognized for attracting large number of native bees and honeybees. For really interesting details about pollination of milkweeds in general check this out! [sticky situation](#) \$22 for 3, 4" pots

## New England Aster

*Symphotrichum novae-angliae*. Also known as Michaelmas daisy. This native favorite is an upright plant that gets 3 to 6 feet high and 2 -3 feet wide. The many quarter sized blooms vary from bright purple, light lavender to pink with a yellow center. Flowers bloom in late summer to fall. Make good cut flowers. May require staking or can be pinched back early in summer to encourage shorter bushier growth. Grows in full sun. Prefers moist sites but tolerates dry sites. Resistant to deer and rabbits, salt and drought. Native to US east of Continental divide, except the gulf states (FL, LA, TX), native to eastern Canada. Attracts many types of bees, including bumble bees, honey bees, miner bees: flies and skippers (type of butterfly noted for darting or skipping flight). Nectar source for various butterflies. Caterpillar and larva host to the pearl crescent and silvery checkerspot butterflies. Songbirds and small mammals eat the seeds. Good for rain gardens, pollinator gardens, and butterfly gardens. Provenance: New England \$15 for 5, 2" plugs.

## Common Bearberry

*Arctostaphylos uva-ursi*. Also known as Kinnikinnick. A low growing native shrub. It is from the family ericaceae and is evergreen. Thick leathery leaves are light green in spring, deep green in summer and reddish purple in fall. It has showy flowers and fruits. Flowers are pink or white, bell-shaped and in clusters. Bright red berries last into/through winter. This shrub gets 6-12 inches tall and can spread 3 to 6 feet. Grows best in sandy and well drained soils in full sun. Does well on rocky and gravelly sites, makes a lovely groundcover along rock wall, edge of woods. Does not grow well south of USDA Zone 7. When planting do not compact soil too tightly and do not fertilize. This native plant habitat is circumpolar, being found in northern parts of North America, higher elevations along the Rocky and Appalachian mountains, northern Europe and Asia. As its name suggests the berries are eaten by bears, and important spring food for bears. Berries are eaten by songbirds and gamebirds, wild turkey, deer and other mammals. Hummingbirds come for nectar from the flowers. Special value to a large number of native bees. Larval host for butterflies and moths: Hoary Elfin, Brown Elfin, and Freija Fritillary. \$25 for 2 pots: one quart size.

## Bunchberry or Canada Dwarf Dogwood

*Chamaepericlymenum canadense*, *Cornus Candensis*

Provenance: Cumberland County & Hancock County, ME

This sub-shrub is 4-8 inches tall with white bracts that appear as the flower and cluster of tiny purple flowers in the center. Flowers bloom May through early July, followed by a cluster of red berries. It spreads through rhizomes and will create a ground cover. Grows in shady, wet conditions and tolerates extreme cold. Leaves may persist through winter. But it cannot be walked on. Creeping dogwood's berries are eaten by birds and mammals. Plants in the genus *Cornus* support three specialized bees of the genus *Andrena*. "Specialist bees have evolved a specific relationship with a few or even just one plant species. Some specialist bees forage for pollen that can only be found on one plant species.

These specialists emerge from their nests at the same time

their host plant begins to flower."

<http://www.helpabee.org/specialists-vs-generalists.html>

Interesting feature: this plant has one of the fastest plant motions. It has a trigger release for its pollen. Watch here as the 'catapult' action is captured by a camera shooting 10,000 frames per second. [bunchberry catapult motion](#) Native distribution is north America, Canada and Greenland. \$25 for 2 pots of 1 quart size.
